Mod	dule Aims, Learning Outcomes and Indicative Contents
	أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية
Module Aims	1-Developing and strengthening students' problem-solving skills. In particular, students
أهداف المادة الدراسية	2- Teaching them to read, write, speak, and think in the language of mathematics.
	3- Learning how to apply calculus tools to a variety of problem situations.
Module Learning Outcomes	1- Developing and strengthening students' problem-solving skills. In particular, students
	2- Teaching them to read, write, speak, and think in the language of mathematics.
مخرجات التعلم للمادة الدراسية	3- Learning how to apply calculus tools to a variety of problem situations.
Indicative Contents المحتويات الإرشادية	 The area of mathematics known as calculus is primarily concerned with limits, functions, derivatives, trigonometric functions, and infinite series. An important component of modern mathematics education in this subject. Using derivatives to solve related rates problems Using derivatives to approximate points (linearization) Evaluating limits using L'Hopital's law Locating critical points using the first derivative Identifying increasing/decreasing values using the first derivative Locating critical points using the second derivative Identifying concavity and inflection points using the second derivative Using the first/second derivative tests to find local and global extrema Using derivatives to solve optimization problems

Learning and Teaching Strategies					
استراتيجيات النعلم والتعليم					
Strategies • Give emphasis on conceptual understanding.					
	 Set challenging homework that expands on what you learned in class. 				

- Cooperative learning techniques should be used.
- Ask thoughtful questions.
- Concentrate on logical thinking and actual problem-solving.
- Use a variety of assessment methods.

Module Aims, Learning Outcomes and Indicative Contents						
	أهداف المادة الدر اسية ونتائج التعلم والمحتويات الإرشادية					
Module Aims أهداف المادة الدر اسية	Principles of Chemistry is a course designed to provide a general chemistry background to environmental studies majors. Chemistry is a rapidly growing field and is essential in understanding our natural environment. Having a basic knowledge on the atom and its structure, the way atoms connect to form molecules, the properties of chemical substances and the way they react helps students understand the science in their everyday life and provides an essential background and tool for students. Additionally, it provides knowledge of organic substances and compounds - that is, those that contain carbon in their molecular structure, along with other elements such as hydrogen, nitrogen, oxygen, and sulfur. As well as, it will provides with the principles of green technologies and a deep understanding of sustainability issues that will lead to the reduction or elimination of hazardous substances involved in the design, manufacture and application of chemical products. Also examine the environmental, economic and social benefits arising from the transformation of the chemical industries of the future.					
	 1-Know the fundamentals of the physical and chemical properties of matter, and explain the theoretical principles and important applications of classical analytical methods. 2-Classify and give the nomenclature of organic compounds, and explain in details the qualitative and quantitative aspects of organic compounds 3-Students will be able to explain why chemistry is an integral activity for addressing economic, and environmental problems. 					
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: Part I: General Chemistry In this part explains that the chemistry is the branch of science that deals with the properties, composition, and structure of elements and compounds, how they can					

change, and the energy that is released or absorbed when they change Part II:

Analytical Chemistry

In this part It is designed to provide a basic overview of analytical chemistry, as a field responsible for characterizing the composition of matter, in qualitative terms (what is there) and Quantitatively (how much is present). Nearly all chemists routinely make qualitative or quantitative measurements.

Part III. Organic Chemistry

In this part II is designed to provide a fundamental overview of organic chemistry to students interested in pursuing a career in the sciences. It is focusing primarily on the basic principles to understand the structure, properties, composition, and preparation (by Synthesis or by other means) of Carbon-based compounds, Hydrocarbons, and their derivatives. These compounds may contain any number of other elements, including Hydrogen, Nitrogen, Oxygen, the Halogens as well as Phosphorus, Silicon, and Sulfur, and reactivity of organic molecules. Emphasis is on substitution and elimination reactions and chemistry of the alkyl group.

Part IV sustainable Chemistry

This part it provides an overview of sustainable chemistry and will equip the students with an understanding of how to assess chemical syntheses and processing routes as well as to design sustainable materials and chemicals.

Learning and Teaching Strategies

استر اتيجيات التعلم والتعليم

Strategies

Teaching and learning strategies can include a range of whole class, group and individual activities to accommodate different abilities, skills, learning rates and styles that allow every student to participate and to achieve some degree of success.

	Material Covered			
	What Is Chemistry?			
Week 1	Some Basic Definitions			
	Chemistry as a Science			
	Atoms, Molecules, and Ions			
	Atomic Theory			
Week 2	Molecules and Chemical Nomenclature			
VVCCK 2	Masses of Atoms and Molecules			
	Ions and Ionic Compounds WARITMAN			
	Acids OF ENGINEER TO			
	Chemical Reactions and Equations			
	The Chemical Equation			
	Types of Chemical Reactions: Single- and Double-Displacement Reactions			
Week 3	Ionic Equations: A Closer Look			
	Composition, Decomposition, and Combustion Reactions			
	Neutralization Reactions			
	Oxidation-Reduction Reactions			
	Stoichiometry and the Mole			
	Stoichiometry			
Week 4	The Mole			
	The Mole in Chemical Reactions			
	Mole-Mass and Mass-Mass Calculations			
	Analytical Chemistry:			
Week 5	Fundamental way of expressing the concentration of solution:			
	-Molality, Normality, Molality and Tutorial			
	Equilibrium-Constant Expressions			
Week 6	Weak acids and base			
	Dissociation Constants for Conjugate Acid / Base Pairs			

	Relationship between Ka and Kb
	Hydronium Ion Concentration of Solutions of Weak Acids
	Analytical Methods of Analysis:
	a-Qualitative Analysis b-Quantitative Analysis
	Volumetric Analysis
Week 7	(Titrimetric) & Analysis, Acid- Base, Redox, Precipitation, Complex Titration, Methods of Calculation, Titration Curves
	Gravimetric Analysis
	Precipitation Reactions, Direct and Indirect Methods of Analysis, Ksp.
	Instrumental Methods of Analysis.
	Acids and Bases
	Arrhenius Acids and Bases
Week 8	Brønsted-Lowry Acids and Bases of ENG
.,,	Acid-Base Titrations
	Strong and Weak Acids and Bases and Their Salts
	Auto-ionization of Water.
	Buffer Solutions:
	Calculating the pH of buffer solutions
Week 9	The Henderson-Hasselbalch Equation
	Properties of Buffer Solutions
	The Composition of Buffer Solutions as a Function of pH: Alpha Values
	Preparation of Buffer
	Organic Chemistry: 2017
	Classification of organic compounds:
Week 10	-Aliphatic compounds (Akane, Alkene, Alkyne) and cycloalkane
	-Aromatic compounds
	-Functional group: Alkyl halide, Alcohols, Ethar, Aldehydes, Ketones, Esters, Carboxylic acids, Thiophen, Disulphide
	Aromatic Compounds:
Week 11	Structural formula of benzene ring, nomenclature, preparation, properties, chemical reaction, nitration, halogenation -Chemical reaction of Toluene, Xylene, Ethyle benzene, Styrene, Aniline.
Week 12	Hydrocarbons from Petroleum:

	Fossil Fuels, Refining, Alkanes from Natural Gas, Crude Oil Refining, Fractional Distillation, Cracking, Octane Number
	Green Chemistry
	Introduction
Week 13	Pollution Prevention
	Sustainability/Real world Green Chemistry
	Renewable energy
Week 14	Preparatory week before the final Exam
	<u> </u>
Week 15	Final exam

Delivery Plan (Weekly Lab. Syllabus) المنهاج الاسبوعي للمختبر **Material Covered** Week 1 Introduction of Analytical Chemistry Preparation the standard solutions: Primary standard solution and secondary standard Week 2 solution Week 3 Volumetric Analysis: Titration of hydrochloric acid with sodium carbonate Week 4 Titration of Mixture (base strong and base weak) with acid strong Week 5 Acidity of Vinegar, Quiz Week 6 **Introduction of Organic chemistry** Week 7 Measurements the physical properties of organic compounds: Boiling point Week 8 Measurements the physical properties of organic compounds: Melting point Week 9 Simple Distillation, Quiz Preparation of organic compounds (ester) Week 10 Week 11 Identification of functional groups :Saturated and Unsaturated Aliphatic Compound. Week 12 Identification of functional groups :Aldehyde and ketone Week 13 **Final Examination Lab**

Modu	Ile Aims, Learning Outcomes and Indicative Contents				
	أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية				
Module Aims أهداف المادة الدراسية	is an inevitable part of commerce education. The course is aiming to equip all the commerce aspirants to have basic skills as well as hands on experience on word processing, for creating excel spreadsheets, for building databases through the use of Microsoft Office Word, Excel, and VBA.				
Module Learning	1- To familiarize students with the use of Microsoft Word				
Outcomes	2- To familiarize students with the use of MS Excel				
مخرجات التعلم للمادة الدراسية	3- To familiarize students with the use of Excel Visual basic application				
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: Part I: fundamentals of Microsoft word In Part 1 we will provide students with the skills to create documents using Microsoft Word. It will also provide knowledge of how to create your own document for work, college, or home. Students will learn the basics, creating documents, formatting text, adding graphics, images, Word chart, and many other features available. You will see a full list of course content below. You'll also cover charts and tables, as well as using forms and mail merge. Part II: fundamentals of Microsoft Excel this part provides all the tools necessary to create and use basic spreadsheets. Participants will receive an overview of the interface and learn the various methods for entering and editing data. Additionally, participants will learn the various ways to write formulas, Create Worksheets and Workbooks, data analysis, create charts. Apply Custom Data Formats and Layouts, and others which will used to streamline reporting, turn raw data into presentation-ready graphs or chart. where One of the most common uses of Excel in petroleum engineering is for organizing and analyzing data related to well production data. Part III: Visual basic Application In Part 3 we will provide students with the skills to create & develop vb applications, where that allow Engineers to develop engineering applications that run in the Windows environment. VB provides the engineer a programming tool to write simple programs quickly that meet their needs. Example programs written using VB include gas and oil fluid correlations, interpolation software, gas well bottom hole pressure				

from surface conditions, volumetric reserve calculations, simple log analysis, water pattern analysis and bottom hole pressure analysis.

Learning and Teaching Strategies				
استر اتيجيات التعلم والتعليم				
Strategies	The main strategy that will be adopted in delivering this module is to Encourage students to ask and answer questions, as well as training students to implement many practical exercises in the laboratory (which covers most of what is studied in theoretical lectures), which in turn gives students the ability to carry out the work required of them in the future in their practical life.

Mod	Module Aims, Learning Outcomes and Indicative Contents						
	أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية						
Module Aims أهداف المادة الدر اسية	This course deals with the understanding and importance of integrity and responsible, ethical and scientific behavior towards engineering work and the most important associations concerned with these important topics and their impact on the future of engineering work						
Module Learning Outcomes	 Develop the student's professional history and engineering development Develop the student's the importance of professional behavior and a sense of responsibility 						
مخرجات التعلم للمادة الدراسية	3- The most important professional associations and codes of ethics						
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: Part I: Introduction • Know why it is important to study engineering ethics • Understand the distinction between professional and personal ethics • See how ethical problem solving and engineering design are similar. Part II: Professionalism and Codes of Ethics • Determine whether engineering is a profession • Understand what codes of ethics are, and • Examine some codes of ethics of professional engineering societies. Part III: Understanding Ethical Problems • Discuss several ethical theories • See how these theories can be applied to engineering situations. Part IV: Ethical Problem Solving Techniques • Apply ethical problem solving methods to hypothetical and real cases • See how flow charting can be used to solve ethical problems • Learn what bribery is and how to avoid it.						

Part V: Risk, Safety, and Accidents

- Know the definitions of risk and safety
- Discover different factors that affect the perception of risk
- Study the nature of accidents
- Know how to ensure that your designs will be as safe as possible.

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies

Teaching and learning strategies can include a range of whole class, group and individual activities to accommodate different abilities, skills, learning rates and styles that allow every student to participate and to achieve some degree of success.

Module Aims, Learning Outcomes and Indicative Contents				
	أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
Module Aims أهداف المادة الدراسية	This module covers two main parts: •Fundamental principles, about the motion, velocity, newton's laws, statistic inertia, fluid inertia, sliding fraction, rolling fraction and help the student to solve and understand the problems. •Strength of material is the discipline of investigating the relationships that exist between the structures and properties of materials. Engineering material is designing or engineering the structure of a material to produce a predetermined set of properties. This part covers principles of stress and strain. Develops understanding of force, heat deformation, material properties, allowable strength, young modulus Poisson ratio. It also covers hook laws, shear stress, Moher circles, and the general strain energy equation.			
Module Learning Outcomes مخرجات التعلم للمادة	1- The program prepares students for research and development in many frontier areas of engineering, including such as newton's laws, statistic and dynamic mechanic. 2-All students study the core theoretical subjects of fluid mechanics, dynamics, supplemented by courses in mathematics. 3- The program can be tailored to a student's interests through electives in engineering, mechanic or other applied sciences. 4 The program learn students the fundamental concepts of stress and strain. 5- Explain the concepts of shear and bearing stress. 6- Learn the Allowable force and safety factor for design materials. 7- Analysis and draw the Mohr's circle with bending diagrams			
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: Part I: fundamentals of Engineering Mechanics principles, about the motion, velocity, newton's laws, statistic inertia, fluid inertia, sliding fraction, rolling fraction and help the student to solve and understand the problems. (24 hrs) Part II: Strength of material fundamentals principles of stress and strain. Develops understanding of force, heat deformation, material properties, allowable strength, young modulus Poisson ratio. It also covers hook laws, shear stress, Moher circles, and the general strain energy equation. (28 hrs)			

Learning and Teaching Strategies استراتیجیات التعلم والتعلیم The main strategy that will be adopted in delivering this module is to Encourage students to ask and answer questions, as well as presenting many experimental work labs to increase students' knowledge.

IVIO	dule Aims, Learning Outcomes and Indicative Contents
	أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية
Module Aims أهداف المادة الدراسية	Semester includes a display problem of representing the needs of the community using the learning method is based on the problem. The problem, which represents the needs of the community scenario includes a description of the problem is similar to the practical realities and limitations of the data that can be obtained by the engineer to reach a solution based on the research and information collection Presented. The other side includes the use of the computer program (AutoCAD soft.) to draw using the computer to build his skills in the field of engineering drawing and design.
Module Learning Outcomes مخرجات التعلم للمادة	 The student be able choose the mechanism of data collection to solve the engineering problem. The student be able to determine many of solutions to solve the problem and choose the best. The student be able to search of references using the web to solve the problem in an engineering method depend on mathematic. Students be able to draw by using AutoCAD. Students be able to write the scientific report In an organized and clear manner.
Indicative Contents المحتويات الإرشادية	Indicative Contents will include: Solve problems by using the problems based learning. How to search and reach to the right information. how to take more effective notes. Work as group and how to participate more confidently in group discussion work. Improving accuracy in writing a scientific reports.

Delivery Plan (Weekly Syllabus)

	المنهاج الاسبوعي النظري
	Material Covered
Week 1	Definition the scenario problem in engineering practice, and definition the process of Problem Based Learning Method (PBL) in Engineering practice.
Week 2	Describe the drawing and modifying tools bar in AutoCAD.
Week 3	The scenario of problem in (PBL). The needs of the society (The Problem scenario)
Week 4	Discussion the scenario of problem, and determine the start point to solve the problem and how looking for references in the web.
Week 5	Drawing by using rectangular and polar arrays.

Week 6	Describe how write the items of the report of PBL.
Week 7	Advice on writing as a group.
Week 8	Determine the references required to solve problem determine the standard required.
Week 9	Draw different exercises for the layouts with dimensional mode.
Week 10	The scientific presentation items. Explanation of the interface of the power point software.
Week 11	Initial Report of the problem scenario. Discussions Initial Report of the problem scenario.
Week 12	Drawing with dimensions the shape by AutoCAD of the design of the problem scenario.
Week 13	Discussion the initial report of the groups. The first evaluation of student group reports
Week 14	Discussions and evaluating the Final report of groups of students.
Week 15	Discuss and evaluating the final report of the student groups by presenting to the final report using the PowerPoint software.
Week 16	Preparatory week before the final Exam

Learning and Teaching Resources مصادر التعلم والتدريس Available in the Library? Required Texts Randy H. Shih , "AutoCAD 2016 Tutorial First Level 2D Fundamentals", No

	Note: For problem scenario by PBL There is no required text book, however student will have to investigate online and library resources on the design process.

	أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
Module Aims أهداف المادة الدراسية	In view of the growing importance of English as a tool for global communication and the consequent emphasis on training students to acquire language skills, this syllabus of English has been designed to develop linguistic, communicative and critical thinking competencies of Engineering students. In English classes, the focus is going to be on the skills development in the areas of vocabulary, grammar, reading and writing. For this, we are going to use the prescribed text for detailed study. The students are encouraged to read the texts leading to reading comprehension and different passages may be given for practice in the class. The time should be utilized for working out the exercises given after each excerpt, and also for supplementing the exercises with authentic materials of a similar kind, for example, newspaper articles, advertisements, promotional material etc. The focus in this syllabus is on skill development, fostering ideas and practice of language skills in various contexts and cultures.			
	The course will help to: Improve the language proficiency of students in English with an emphasis on Vocabulary, Grammar, Reading and Writing skills. Equip students to study academic subjects more effectively and critically using the theoretical and practical components of English syllabus. Develop study skills and communication skills in formal and informal situations.			
Module Learning Outcomes	 Use English Language effectively in spoken and written forms. Comprehend the given texts and respond appropriately. Communicate confidently in various contexts and different cultures. 			
مخرجات التعلم للمادة الدراسية	4. Acquire basic proficiency in reading and listening, writing and speaking skills.			
Indicative Contents المحتويات الإرشادية	Key skills taught will include: The basic structure and style of an academic essay. How to read texts more quickly and more critically, and how to use their ideas in written and oral arguments. What to listen out for in lectures and how to take more effective notes. How to participate more confidently in group discussion work. Improving accuracy in speaking and writing. Using a wider range of vocabulary to express your views more clearly. Giving formal presentations			
	Learning and Teaching Strategies			
استراتيجيات التعليم				

Strategies	Vocabulary building. This is an important component of any English class. This strategy focuses a portion of each classroom session on building a better vocabulary. Writer's workshop. Have students participate in a writer's workshop several times each year. The writing workshop model allows students to learn about and participate in all aspects of the writing process: drafting, revision, editing and publishing.
	Peer response and editing. This can be a very valuable teaching strategy for both the teacher and the student, and there are many peer response strategies to try in class. Students get a chance to think critically about others' writing and see the results their classmates got from a writing assignment.

Module Aims, Learning Outcomes and Indicative Contents				
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية				
Module Aims أهداف المادة الدراسية	Human rights are the social standards and moral principles that must be available to all human beings. These rights cannot be violated. They are due and inherent to every person simply because they are human. They give all human beings value and dignity, and their basis is justice, freedom and peace. Full knowledge of their contents, borders and ways of guaranteeing them, as the provision for the inclusion of rights in the core of international and national constitutions and covenants does not achieve practical benefit unless effective guarantees are available against the violations they are exposed to over time As for Democracy is the rule of the people by the people and for the people without prejudice to the rights of states, nations and peoples by choosing the mechanisms and forms that suit them. As for its forms and expressions, they are subject to the specificities of nations and peoples and the special circumstances of societies. The essence of democracy is the rule of the people by the people for the benefit of the people, which includes fixed features and elements, the most important of which are: respect for man as an end, not a means, participation in governance by the people, and achieving the satisfaction of the governed.			
Module Learning Outcomes	An ability to skillfully communicate orally with gathering of people and in writing with various managerial leavels An ability to work adequately on teams and to set up objectives, plan activities, meet due dates and manage risk and uncertainty			
مخرجات التعلم للمادة الدراسية				
Indicative Contents المحتويات الإرشادية	Developing the student's analytical and critical skills regarding the reality and future of human rights and democracy Enabling students to understand the importance of education and its role in spreading the culture of human rights and democracy in building a civilized society based on good governance, the most important of which is belief in human rights and education on them and active participation in governance through free and fair elections.			

Learning and Teaching Strategies				
	استراتيجيات التعلم والتعليم			
Strategies	A- Spreading the culture of human rights and informing university students about it. B - The student's awareness of his civil, political, economic, social, cultural and environmental rights and the importance of preserving them and not waiving them. c- Raising awareness and educating university students about the importance of democracy, its methods and how to practice it, and thus contribute to establishing the rule of law, which adopts democracy as a basis for building it. d- The need for the student to realize that the real bet on achieving the democratic system in the country is how to root the concept of democracy and its principles and apply them effectively and successfully away from copying and quoting from others.

Week 4	Human rights guarantees at the internal and external levels
Week 5	Guarantees of human rights at the Islamic level
Week 6	The human rights future/The technology developmation and its effect on the rights and the freedoms/ The role of regional human rights organizations in protecting rights
Week 7	The child rights in Islam/The woman rights in Islam /Non-overnmental organizations and their role in the defense of human rights/Intellectual human rights/Fight Human Trafficking

Week 8	The concept of democracy and its roots / Definition of democracy
Week 9	The democracy between global and the privat
Week 10	forms of democracy/The direct democracy/The semi-direct democracy/The Parliamentary democracy
Week 11	The Parliamentary democracy The Parliamentary democracybasics and its faces
Week 12	Parliament and its internal organization
Week 13	The election Concept/constituency/Electoral lists/Election campaign vote
Week 14	election system Direct and indirect selection/ Individual selection and list/Majority system and proportional representation/interests representation system/Optional voting system and secret and compulsory voting
Week 15	Preparatory week before the final Exam
Week 16	Preparatory week before the final Exam

Relation with other Modules				
العلاقة مع المواد الدراسية الأخرى				
Prerequisite module	None	Semester		
Co-requisites module	English Language I	Semester	1	

Mod	dule Aims, Learning Outcomes and Indicative Contents			
	أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
	1- Identify the basics of oil and gas industry			
	2- This course aims to get familiar with the abbreviations and terminology used in			
Module Aims	the oil industry			
أهداف المادة الدراسية	3- Explain all operations that related to explore, drill, completion and produce oil			
	wells as well as post-production procedures like well stimulation and production			
	enhancement.			
	To Understand the fundamentals of the petroleum industry, which including:			
	1- Petroleum & Crude Oil Definition			
Module Learning	2- Petroleum Formation Theories			
Outcomes	3- Petroleum exploration methods			
	4- Oil and gas drilling operation and drilling fluid types			
مخرجات التعام المادة	5- Identify oil and gas reservoirs, types of oil and the nature of oil formations			
مخرجات التعلم للمادة الدراسية	6- Well completion and Production operations			
عيسانين ا	7- post-production operations like well stimulation and artificial lift			
	8- Drive Mechanisms, secondary recovery and enhance oil recovery			
	9- Get familiar with the key abbreviations and terminology used in the oil industry.			
	Indicative content includes the following:			
	Part I: fundamentals of petroleum engineering			
	Petroleum & crude oil definition, API (American Petroleum Institute), associated gas and			
	non-associated gas, The reservoir classification, biogenic and the abiotic theories for			
	petroleum formation, rock types and petroleum history. (24 hrs)			
Indicative Contents	Part II: Oil and gas well operations			
المحتويات الإرشادية	Drilling operation, drilling fluid types and benefits, well logging and formation			
	evaluation, well cementing and casing, perforation techniques and production			
	operation. (28 hrs)			
	Part III: post-production operation			
	Enhance oil recovery by using artificial lift techniques, secondary and tertiary recovery			
	techniques. (8 hrs)			
	Learning and Teaching Strategies			
	استراتيجيات التعلم والتعليم			
	The main strategy that will be adopted in delivering this module is to Encourage			
	students to ask and answer questions, as well as presenting many explanatory videos			
Stratogics	to increase students' knowledge, since most of the equipment and facilities for the oil			
Strategies	industry are not available in daily life and it is difficult to see them, and also to			
	introduce the student to the most important petroleum terms, abbreviations and symbols that he will need to complete the rest of the academic stages Or to work in			
	the future as an oil engineer.			
	the racare as an on engineer.

Module Aims, Learning Outcomes and Inductive Contents				
Module Aims	1-Preparing applied engineers in the field of engineering sciences who are distinguished by a high level of knowledge and technological creativity, in line with the strict standards adopted globally in quality assurance and academic accreditation of the corresponding engineering programs, while adhering to the ethics of the engineering profession.			
	 Enable the student to know and understand work systems, risks, and the factors surrounding them. Enable the student to know and understand theoretical principles in handicrafts and measurements. 			
Module Learning Outcomes	1- To familiarize the student with the vocabulary of occupational safety and its importance in the field of work.			
	2- Acquisition of the student's manual operation skills, for example (Filings and Tinsmith workshops), and mechanical operation skills, for example (Turning).			
	3- Acquisition of the student's mechanical forming skills, for example (Casting and Blacksmithing).			
	4- The student acquires basic engineering skills such as Welding, Carpentry, and Electrical installations that serve him in the professional field.			
	5- Enabling the student to operate the various machines and devices in mechanical operations and formation.			
	6- Cooperative learning by working collectively.			
Inductive Contents	 Introducing the student to the basics of the art of turning and milling, types of cold working machines, the skill of dealing with them, choosing metals, operational tools, and methods of measurement and standardization Introducing the student to the basics of the art of casting, hot forming, metal selection, method of working on casting furnaces and tools, and manufacturing casting molds Familiarize students with the basics of cars and the systems they use, as well as maintenance, disassembly, and assembly processes. Introducing students to the basics of household and industrial electrical appliances, the skill of using tools, and designing electrical circuits and control panels 			

- 5. Introducing the student to the basics of the art of plumbing, leveling surfaces, the skill of using tools, manufacturing and installing geometric shapes, and methods of measurement and standardization
- 6. Introducing the student to the basics of the art of blacksmithing, cold and hot forming of metals, the method of hardening them, and the skills of dealing with hand tools, forming machines, and heating furnaces
- 7. Introducing the student to the basics of the art of filing and manual operation of metals with the help of manual, electrical, and mechanical tools, the skills of dealing with them, and the methods of measurement and standardization
- 8. Introducing the student to the basics of the art of welding, the installation and assembly of metals, the types of welding machines, the skills of dealing with them, the types of welding, and the methods of measurement and standardization
- 9. Introducing the student to the basics of the art of carpentry and woodworking with the help of manual, electrical, and mechanical tools, the skills of dealing with them, and methods of measurement and standardization

Delivery Plan (Weekly Syllabus)				
	Materials Covered			
Week 1	Welding workshop. -Occupational safety and its importance in welding workshops. -Introduction to the basics of welding. -Electric arc exercise. -An exercise for welding straight lines in a circular motion (helical).			
Week 2	Welding workshop - An exercise for welding straight lines with a crescent movement and other welding methods -Construction welding exercise.			
Week 3	Welding workshopWelding two pieces togetherWritten exam in practical exercises			
Week 4	Casting workshop -Occupational safety and its importance in plumbing workshopsIntroduction to the basics of metal castingSimple wooden disc exercise. Half workout.			
Week 5	Casting workshop Wheel exercise.			

	Pushing arm exercise.				
Week 6	Casting workshop.				
	-Complete pulley exercise.				
	-Circular pole exercise.				
	-Written exam in practical exercises.				
Week 7	Blacksmith Workshop				
	-Occupational safety and its importance in blacksmithing workshops.				
	-Introduction to the Basics of Blacksmithing.				
	Barbell adjustment exercise.				
	-Eight-star exercise.				
	- Exercise forming the number eight in English.				
	-Six formation exercises in English.				
Week 8	Blacksmith Workshop				
	-An exercise forming the number five in English.				
	- Exercise forming the number nine in English.				
	An exercise in forming an iron model in the form of a circle				
Week 9	Blacksmith Workshop				
	- S-shape exercise.				
	- Air hammer hot barbell exercise.				
	- Exercise to form a circle on an electric bending machine.				
	- Exercising cold and hot ornament formation.				
	A written exam in practical exercises				
Week 10	Automotive Workshop				
	-Occupational safety and its importance in car maintenance workshops.				
	-An introduction to cars and their basic parts.				
	-Parts of the engine, how it works, types of engines, and methods of				
	classification.				
Week 11	Automotive Workshop				
	- Open the engine and identify the parts				
	-Lubrication system				
	-Cooling system.				
Week 12	Automotive Workshop				
	-The fuel system.				
	-The old and new ignition circuits.				
	-Written exam in practical exercises.				
Week 13	Turning Workshop				
	-Introduction to lathe machines and identifying their parts				
	-Measuring tools and the use of an oven measuring instrument				
	-Circular column lathing exercise on different				
	diameters.				
Week 14	Turning Workshop				
	-Exercise using the pen (semicircular R) brackets.				
	An exercise in making different angles using a pen (square + angle pen 55).				

Week 15	Turning Workshop				
	- Making shaft with different diameter exercises using (left and right pen)				
	- Workout (Tube Connection).				
	-Written exam in practical exercises.				
Week 16	Fitting workshop				
	Occupational safety and its importance in filing workshops				
	-An introduction to the basics of filing				
	-Pen holder exercise "preparation and preparation"				
Week 17	Fitting workshop				
	Pencil holder exercises finishing and assembling.				
Week 18	Fitting workshop				
	-The catcher exercise.				
	- Clamping exercise.				
	Written exam in practical exercises.				
Week 19	Carpentry workshop				
	-Occupational safety and its importance in carpentry workshops.				
	- An introduction to carpentry, its types, types of wood, tools used, and				
	preparation Preparing the tools used				
	Face modification exercise using the reindeer				
Week 20	Carpentry workshop				
	Garden fence work and how to connect its parts, the eight-star exercise				
Week 21	Carpentry workshop				
	- Wood smoothing exercise using smoothing paper				
	- Wood dyeing exercise in three stages				
	Final smoothing and varnishing exercise				
	Written exam in practical exercises				
Week 22	THE REVIEW OF THE PARTY OF THE				
	The tinsmith workshop				
	Occupational safety and its importance in plumbing workshops				
	An introduction to plumbing, its tools, and plumbing stages				
	Planning and marking exercise on metal plates				
Week 23	The tinsmith workshop				
	Geometric shapes				
	Types of individuals and methods of individuals				
	Geometric shape individuals exercise on a metal board				
Week 24	The tinsmith workshop				
	Cone members exercise				
	- Exercise of cylinders with an oblique cut				
	Roll forming operations				
	Connection without the use of an intermediary				
	Written exam in practical exercises				
Week 25	Electric Workshop				

	Occupational Safety and its importance in electrical workshops				
	An introduction to the basics of electrical installations				
	- Linking a simple circuit consisting of a lamp to the control of a single-way				
	switch.				
	Connect two lamps in series with one-way switch control.				
	Connecting two lamps in parallel with the control of a single road switch.				
	Connect two lights with one-way dual switch control.				
Week 26	electric Workshop				
	Connect a fluorescent lamp circuit to a one-way switch control				
	Connecting an electric supply socket circuit to the control of a separate or				
	combined one-way switch				
	Written exam in practical exercises				
Week 27	electric Workshop				
	Occupational Safety and its importance in blacksmithing workshops				
	Introduction to the basics of Blacksmithing				
	- Barbell adjustment exercise NAR/				
	Eight-star exercise OF ENGINEERS				
	- Exercise for <mark>min</mark> g the number eight in English				
	Exercise fo <mark>rm</mark> ing the number six in English				
Week 28	supplementary training curriculum				
	Welding workshop				
	Plumbing workshop				
	Blacksmith <mark>'</mark> s workshop				
Week 29	supplementary training curriculum				
	- Automot <mark>iv</mark> e workshop				
	- Turning <mark>w</mark> orkshop				
	Fitting workshop				
Week 30	supplementary training curriculum				
	Carpentry workshop				
	The plumbing workshop				
	electric Workshop
